It certainly is food for thought and fun to see. My code is as following:.

Byusingonlytheprimefactors,youcantakeanydivisorbyremovingthecorre  
In that case, you can make a single static instance. My code is as following:.

The latter consumes two strings, called new and old and a list of strings. If we now accept that it merely matters whether a number is a part of a set or not, it is almost immediately clear that we can use lists in two different ways to represent sets. Make up an example where add-at-end consumes an empty list before you read on.
