What seemed like futuristic performance tech back in the 1950s is now completely obsolete. Electric motors and batteries are getting better and better. In the early days of driving, people would have to start vehicles with a hand crank, an unpredictable science that sometimes resulted in a broken arm if the crank kicked. This will be the case as long as driverless and human-controlled vehicles share the road. To counteract this effect and prevent premature battery failure, a battery should never be subjected to a low charge level over a long period. You Got It!
